TECHNICAL PROGRESS REVIEWS

The Di··ision of Technical Information, U. S. Atomic Energy Commission, also publishes the Technical Progress Reviews, a series of four quarterly journals on nuclear technology. These journals, compiled by specialists and recognized authorities, summarize, evaluate, and reference the progress of development in four important fields.

Isotopes and Radiation Technology P. S. Baker, A. F. Rupp, and associates, Oak Ridge National Laboratory. Reviews AEC-sponsored projects and related significant worldwide developments in radioisotopes and radiation technology.

Nuclear Safety Wm. B. Cottrell, W. H. Jordan, J. P. Blakely, and associates, Nuclear Safety Information Center, Oak Ridge National Laboratory. Covers topics relevant to the analysis and control of hazards associated with nuclear reactors and with operations involving fissionable materials and the products of nuclear fission.

Power Reactor Technology Argonne National Laboratory. Reviews research, development, design practices, and operating experiences associated with power reactors, including aerospace applications.

Reactor Materials E. M. Simons and associates, Battelle Memorial Institute. Covers the properties, behavior, and fabrication processes of materials used in nuclear reactors and associated equipment.
